TITLE OF INVENTION: NOVEL LOW DENSITY LIPODROTEIN
BINDING PROTEINS AND THEIR USES IN DIAGNOSING AND
TREATING ATHEROSCLEROSIS
NUMBER OF SEQUENCES: 42
CORRESPONDENCE ADDRESS:
ADDRESSE: Fish & Richardson P.C.
STREET: 225 Franklin Street
CITY: Boston
STATE: MA
COUNTRY: USA
ZIP: 02110-2804
COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
OPERATING SYSTEM: DOS

/note="Organ: pooled; Vector: p7773D-Pac (Pharmacia) with
a modified polylinker; Site=1: Not I; Site=2: Ecc RI;
Equal amounts of plasmid DNA from five normalized
libraries were mixed, and ss circles were made in vitro.
Following HAP purification, this DNA was used as tracer in
a subtractive hybridization reaction. The driver was
PCR-amplified cDNAs from pools of 5,000 clones made from
the same 5 libraries. The pools consisted of the following
libraries and cloneIDs: Soares NDHSF pool 1:
145032-147335, 147720-148103, 148872-149255, 15002 -
150407, 151176-152327 Soares ND2H8-9W pool 1:
758280-760583, 772104-774407 Soares NDHPA pool 1:
768280-306311, 320136-32823, 336280-32663 Soares NDHPA

LBPs are capable of binding to native and methylated low density lipoproteins (LDLs). Isolated polynucleotides encoding novel LBPs and their fragments are claimed, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent
                                                                                                                                                                                                                                                                                                                                                                                                         Lees
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           novel low density lipoprotein binding proteins (LBPs) of the invention (see AAB82797-820). LBPs are capable of binding to native and methylated low density lipoproteins (LDLs). Isolated polynucleotides encoding novel LBPs and their fragments are claimed, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are also claimed, as are pharmaceutical compositions comprising an LBP polypeptide or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Low density lipoprotein binding protein 1; LBP-1; LDL; atherosclerosis; antiarteriosclerotic; therapy; diagnosis; vaccine; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score:
                                                                         novel low density lipoprotein binding proteins (LBPs) of the invention (see AAB82797-820). LBPs are capable of binding to native and methylated low density lipoproteins (LDEs). Isolated polynucleotides encoding novel LBPs and their fragments are claimed, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are also claimed, as are pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions

                                                                                                                                                                                                      The present sequence is that of a polynucleotide encoding a fragment of novel low density lipoprotein binding proteins (LBPs) of the invention (see AABS/797-820). LBPs are capable of binding to native and methylated low density lipoproteins (LDLs). Isolated polynucleotides encoding novel LBPs and their fragments are claimed, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are also claimed, as are pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12-NOV-2001

                                                                            This cDNA clone codes for novel human low density lipoprotein (LDL) binding protein LBP-2 (see AAW49041). It was isolated by screening human liver, aorta and foetal brain cDNA libraries with rabbit LBP-2 cDNA. cDNA clones (see AAW2934-9) and encoded rabbit and human LBPs (see AAW49037-42) are claimed. An abnormality in LBP metabolism or structure is diagnostic of a risk for atherosclerosis. The invention provides: methods for determining if an animal is at risk for atherosclerosis (e.g. for prenatal screening); methods for treating atherosclerosis (including gene therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent formation of atherosclerotic plaque; and methods for treating a cell having an abnormality in LBP structure or metabolism. Pharmaceutical and vaccine compositions are also provided, as well as recombinant vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid encoding low density lipoprotein binding proteins and related vectors - transformed cells, proteins, and modulators of binding, useful for treatment and diagnosis of atherosclerosis and for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    misc_feature

The present sequence is that of a partial cDNA encoding novel human low density lipoprotein binding protein 2 (LBP-2, see AAB82803). Clones were isolated from human foetal brain, liver and aorta cDNA libraries using rabbit LBP-2 cDNA as probe. A full-length cDNA clone is given in AAH26499, and a genomic DNA sequence is given in AAH26495. LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods are thereselerosis, methods for treating an agent for use in treating atherosclerosis, methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LB are also claimed LBP polypeptide or nucleic acid, and vaccine

Claim 1; Page 670-671; 1299pp; English

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human CC proteins AAB58711 - AAB59128. The DNA and protein sequences are CC associated with breast and ovarian cancer. Included in the invention are Sequences AAF22032 - AAF22040 and AAB59129 which are used in the CC isolation and characterisation of the DNA and protein sequences of the CC invention. The breast and ovarian cancer associated DNA, protein, agonist cor antagonist sequences exhibit cytostatic; immunosuppressive; noctropic; cc neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; cantifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly corporate and ovarian cancer. The nucleic acid sequences, proteins, agonists and ovarian cancer. The nucleic acid sequences, proteins, agonists cof immune disorders e.g. Addison's disease, altroimmune condities, rheumatoid arthritis and ulcerative colitis; cc cardiovascular disorders such as myocardial ischaemias; wound healing;

No.:
The present sequence is that of cDNA encoding a portion (see AAB82799) of novel rabbit low density lipoprotein binding protein 2 (LBP-2). The cDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. A full-length sequence for LBP-2 is given in AAH26500. The invention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an
                                                                                                                                                                                                                                                                                                                                               02-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                   (LBP-3)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and vaccine
```

The present sequence is that of cDNA encoding a portion (see AAB82800) of novel rabbit low density lipoprotein binding protein 3 (LBP-3). The cDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. A full-length sequence for rabbit LBP-3 cDNA is given in AAH26491. The invention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well ass expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent

Example 2; Fig 13; 143pp; English.

The present sequence is that of the coding region of the human gene (see also AAH26494) encoding novel human low density lipoprotein binding protein 2 (LBP-2, see AAB2806). The gene was isolated from a genomic DNA library using LBP-2 cDNA as probe. The LBP-2 protein predicted from the present sequence differs from that predicted from a cDNA clone (see AAB2803) in that it contains an additional 321 amino acids at its N-terminus (the cDNA is a 5' truncation). LBP-2 mucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are capable of binding to native and methylated LDL. Also claimed are consisted LBP polypeptides, and biologically active fragments and capacities of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for revaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. It was isolated by functional screening of a cDNA library, produced from balloon-deendothelialised CC healing rabbit abdominal acrta mRNA, for clones encoding LBPs able to CC bind both native and methyl LDL. cDNA clones (see AAW2834-39) and CC encoded rabbit and human LBPs (see AAW49037-42) are claimed. An CC at risk for atherosclerosis. The invention provides: methods for CC a risk for atherosclerosis. The invention provides: methods for CC determining if an animal is at risk for atherosclerosis (e.g. for CC prenatal screening); methods for treating atherosclerosis (including gene CC therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent CC formation of atherosclerotic plaque; and methods for treating a cell control compositions are also provided, as well as recombinant vectors and host cells used to produce recombinant LBP

The present sequence is that of cDNA encoding a portion (see AAB82798) of convel rabbit low density lipoprotein binding protein 2 (LBP-2). The cDNA convel rabbit low density lipoprotein 2 (LBP-2). The cDNA converse are converted following screening arabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. A full-length sequence for LBP-2 is given in AAH26500. The invention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP. Pharmaceutical compositions compositions and LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed

The cDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. The invention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, methods for treating a cell having an abnormality in structure or metabolism of LBP. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2561 BP; 372 A; 937 C; 879 G; 373 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                density lipoprotein binding protein 2 (LBP-2, see AAB82806). The DNA was isolated from a human genomic library by screening with LBP-2 cDNA (see AAH82494). The open reading frame spans 5 sxons. Human LBP-2 cDNA (see acids are among claimed polymucleotides of the invention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for evaluating an acell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    exon
                                       Novel human polynucleotide, SEQ ID NO: 603

The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies CC of the polynucleotides. The probes can be used for chromosome mapping of CC or antisense oligonucleotides can be generated. The polynucleotides and their gene products are used as genetic or biochemical markers (e.g. in CC their gene products are used as genetic or biochemical markers (e.g. in CC carcinogenesis pathway and/or monitor the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC preventive interventions. The polynucleotides, polypeptides and CC preventive interventions. The polynucleotides, polypeptides and CC treat the cancers and proliferative disorders such as neoplasia, CC dysplasia and hyperplasia

US-09-962-055-32	
Patent No. US20020052033A1	
GENERAL INFORMATION:	
; APPLICANT: Lees, Ann M.	
Lees, Robert S.	
Law, Simon W.	
; Arjona, Anibal A.	
TITLE OF INVENTION: NOVEL LOW DENSITY LIPOPROTEIN	ROTEIN
BINDING PROTEINS AND THEIR USES IN DIAGNOSING AND	EIR USES IN DIAGNOSING AND
; TREATING ATHEROSCLEROSIS	33
; NUMBER OF SEQUENCES: 42	
; CORRESPONDENCE ADDRESS:	
; ADDRESSEE: Fish & Richardson P.C.	
; STREET: 225 Franklin Street	
; CITY: Boston	
; STATE: MA	
; COUNTRY: USA	
; ZIP: 02110-2804	
; COMPUTER READABLE FORM:	
; MEDIUM TYPE: Diskette	
; COMPUTER: IBM Compatible	
; OPERATING SYSTEM: DOS
